

MOSES MWANIKI MWANGI

Network & NOC Engineer · 4+ yrs 99.8% uptime delivered MTCNA certified · MikroTik · Zabbix · Routing.
Switching. BGP. GPON/FTTH
Nairobi, Kenya · 0797 198 314 mosesmwangi407@gmail.com · moses-tech-spec.github.io

PROFILE

Network and NOC Engineer with 4+ years of hands-on experience sustaining 99.8% uptime across multi-site fibre and IP network infrastructures in Kenya. Proven ability to reduce service interruptions by up to 30% through ITIL-aligned incident management, rapid root-cause analysis, and disciplined change control across Layer 1–3 environments. Deep practical expertise in MikroTik RouterOS, Routing, GPON/FTTH deployment, Zabbix and Grafana monitoring, VLAN segmentation, firewall ACL policy, PPPoE, QoS, and CPE automation via GenieACS, with a consistent record of enforcing security baselines and delivering weekly KPI and SLA compliance reports to stakeholders. Expanding into cybersecurity with a focus on network hardening, threat detection, and secure infrastructure design, supported by completed Moringa School training and active CompTIA Security+ candidacy.

PROFESSIONAL EXPERIENCE

Network Engineer

Feb 2026 – Present

Hyperwave Network · Nairobi, Kenya

- Improved network-wide visibility and mean-time-to-detect by 40% by deploying and configuring Zabbix on Contabo servers, enabling centralised real-time monitoring, automated threshold alerts, and structured incident escalation across all managed devices.
- Reduced CPE provisioning time by ~60% and eliminated manual configuration drift by deploying GenieACS on Contabo to automate TR-069 device onboarding, ensuring consistent security baselines across every new customer premises installation.
- Achieved zero configuration-loss incidents across all edge routers by designing and scheduling automated MikroTik backup scripts, enabling sub-30-minute configuration restoration during P1/P2 incident response.
- Maintained SLA compliance across 50+ managed devices by providing Tier 2/3 escalation support to field technicians and customer care, applying ITIL-aligned incident and problem management disciplines on every escalation.
- Reduced repeat incidents by 15% by leading ongoing network hardening initiatives, implementing firewall ACL policies, MikroTik security baselines, and structured change-management documentation across the environment.

Freelance Network Consultant

May 2025 – Jan 2026

Self-employed, 8+ SME clients (50–200 users each) · Nairobi, Kenya

- Delivered 98%+ average uptime across 8+ SME networks (50–200 users each) by designing and deploying structured FTTH and IP network architectures with redundant paths, documented runbooks, and capacity plans for each client.
- Reduced recurring network incidents by 25% by configuring and hardening MikroTik RouterOS on every deployment covering firewall rule sets, VLAN segmentation, PPPoE, QoS queues, and per-device security baseline enforcement.
- Improved client incident response time by 35% by implementing Zabbix and Grafana monitoring with custom dashboards, automated alerting, and weekly KPI and uptime reports delivered to each client stakeholder.
- Reduced signal-related callbacks to zero by executing precise GPON/FTTH fibre splicing, terminations, and FAT/closure management, achieving optical loss every installation.
- Enabled seamless client handovers and supported future scalability by delivering complete network documentation, configuration backups, and SLA performance reports at project close for every engagement.

Network Operations Centre (NOC) Engineer

May 2022 – Apr 2025

AfriQ Networks Solution Ltd · Nairobi, Kenya

- Sustained 99.8% network uptime across 100+ routers, switches, and OLTs at multi-site infrastructure by conducting 24/7 real-time monitoring using Zabbix and Grafana, with proactive alerting and structured shift handover reporting.
- Reduced service interruptions by 30% by establishing a rapid ITIL-aligned incident detection and root-cause analysis workflow, resolving Layer 1–3 faults from optical signal degradation to routing misconfigurations within agreed P1/P2 SLA windows.
- Supported GPON infrastructure serving hundreds of subscribers across multiple service areas, by provisioning and configuring ONU/OLT endpoints, base stations, and associated IP addressing.
- Strengthened network security posture by implementing firewall ACL policies and MikroTik device hardening baselines on all newly provisioned equipment, reducing unauthorised access attempts across the estate.
- Improved cross-team incident resolution efficiency by 20% by collaborating with field engineers and frontline support, maintaining structured post-incident reports, and building an internal knowledge base of 60+ resolved cases.
- Enabled data-driven infrastructure investment decisions by producing monthly KPI and uptime reports using Grafana dashboards, covering bandwidth utilisation, SLA adherence, and capacity planning for management review.

Field Technician

Dec 2021 – Apr 2022

AfriQ Networks Solution Ltd · Nairobi, Kenya

- Achieved a 95% client satisfaction rate across 120+ end-to-end FTTH deployments covering fibre pulling, splicing, termination, and ONU configuration by following optical quality checklists and loss-budget verification on every job.
- Reduced post-installation support calls by ~30% by accurately diagnosing and resolving last-mile issues including Wi-Fi coverage gaps, MikroTik router misconfigurations, and optical signal degradation before site sign-off.
- Ensured consistent security baseline compliance from day one of each deployment by installing and configuring CPE (MikroTik routers and managed switches) using standardised hardening templates on every customer site.

EDUCATION

Cybersecurity

Jan 2026

Moringa School — Nairobi, Kenya

Completed Jan 2026. Focus: network hardening, threat detection, and secure infrastructure design.

CERTIFICATIONS

MikroTik Certified Network Associate (MTCNA)

Covers RouterOS configuration, switching, wireless, firewall, and network diagnostics.

CompTIA Security+ — In progress

Candidate. Expected completion 2026. Focus: network security, threat management, and secure infrastructure.
